

LIGHTsafe is a lightweight, LOLER compliant, protective lifting bag. The lifting bag is designed to hold 4 emergency strip light casings and 9 spare bulbs. It has two uses: 1) for the replacement of emergency strip light casing; 2) for the bulbs which need replacing during routine O&M operations in the towers.

It is compact and easy to use, and is designed to help your wind farm technicians to lift and change emergency strip lighting within the wind turbines.

## BENEFITS

The LIGHTsafe's smart features will help your O&M team improve their overall operational efficiency. Giving you better protection for your team and equipment.

- LIGHTsafe is load tested to SWL 15kgs with built-in strip lighting housing pockets (if higher/lower load test is needed this can be arranged). Making it an easier lifting system as there is no need to use a bag within a load tested bag.
- You can either replace the emergency lighting casing or the individual light bulbs. Once they have replaced the item the damaged product/bulbs can be put in the the protective case and returned to the base for repair or disposal.
- LIGHTsafe is proven to limit the damage to bulbs during transportation, and reduce the risk of hazardous gases.

## SPECIFIC USES

Designed specifically to help your wind farm technicians to lift and change emergency strip lighting within the wind turbines.

The LIGHTsafe's smart features have been designed in collaboration with our customers and are fully tested and manufactured in the UK.

## FEATURES

- Approved lifting points and straps
- 4 compartments (strip light casings and 9 spare bulbs)
- Centre compartment has protective storage for replacement bulbs
- Compartment can hold the spare and/or damaged strip light case
- Each compartment has a drawstring pouch to secure the item
- Hook velcro handles for easy opening and closing when working at height
- Shoulder strap (hoop) and loop make the product easier to use and swap the damaged products, than the conventional systems.

**Quality product designed & manufactured in Great Britain**

**Water-repellant - tested for use in all weather conditions**

## QUALITY & STANDARDS

- Static test and coefficient used
- LIGHTsafe conforms to load testing regulations, SWL 15kgs (or higher if needed)
- Fully compliant with our product specification which was developed in accordance with EN ISO 12100 and National Supply Legislation
- Fully complies with Section 6 of the Health and Safety At Work Act 1974 for the UK.
